

# The 1-C Center-Channel Speaker:

## It Puts You In The Center Of The Action

All the exciting magic and realism of the movie theater has been brought home with today's home-theater systems. But without a high-quality center-channel speaker, you're missing the ultimate impact and thrill that the latest technology can offer. The center channel of a Dolby Pro-Logic Surround system is right at the heart of the home-theater experience, just as it is in the movie theater. It reproduces the all-important dialog and center-screen action that brings the movie-theater action into your living room. That's why the remarkable 1-C center-channel speaker from Phase Technology is so important. You see, the 1-C helps present a vast, seamless soundscape, adding the missing sonic pieces to your system.

### THE TECHNOLOGY BEHIND THE MAGIC.

With the 1-C, actors' voices emerge with a startling presence. Sounds are precisely located, as the movie's director intended them to be. When a car, for example, thunders across the screen from one side to the other, the sound moves with it, creating the impression of realism. The 1-C is also precisely balanced, so the sound of that car doesn't change as it moves through the soundscape. In the final analysis, you're right in the center of all the action.

To do all this, the 1-C has been carefully engineered to create a synergistic combination of elements. While many center-channel speakers contain only one or two drivers, the 1-C uses three active drivers. Twin 5-1/4-inch mid/bass drivers are fabricated with advanced polypropylene cones to give natural body and realism to the sound, free of distortions that can cause colorations. In addition, a 3/4-inch dome tweeter reaches up into the highest octaves to produce clear, pristine high frequencies. It is also ferrofluid-cooled for high power-handling capability. And because one surface of the 1-C enclosure is angled, the speaker can be placed either above or below your video screen to direct the sound to your viewing position on optimum axis. Of course, the 1-C is also magnetically shielded to eliminate interference with the video picture. In short, Phase Technology has done it right. And the result is pure movie magic.

### THREE DECADES OF LEADERSHIP

Phase Technology has been a leader and innovator in the loudspeaker arena for over thirty-seven years. With many patents and awards to our credit, including the patent on the industry-standard soft-dome tweeter (Patent Number 3328537), we have been the manufacturer's manufacturer, building speakers that carry the names of some of the most renowned companies in audio. Only an organization with our experience and technological know-how could have produced the 1-C, a remarkable achievement in home-theater technology.

Experience the startling added dimension of the 1-C at your nearest Phase Technology retailer.

**DRIVERS:** *Low Frequency* - two 5.25" polypropylene woofers, *High Frequency* - .75" ferrofluid cooled dome tweeter • **FREQUENCY RANGE:** 80 - 20,000 Hz  $\pm$  3db • **SENSITIVITY:** 90 db • **RECOMMENDED AMP POWER:** 15 - 75 watts • **IMPEDENCE:** 8 Ohms • **DIMENSIONS:** 20" x 6.25" x 7.5" • **FINISH:** black laminate • **SHIPPING WEIGHT:** 23 lbs.

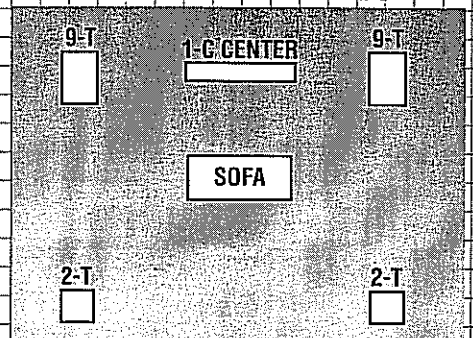

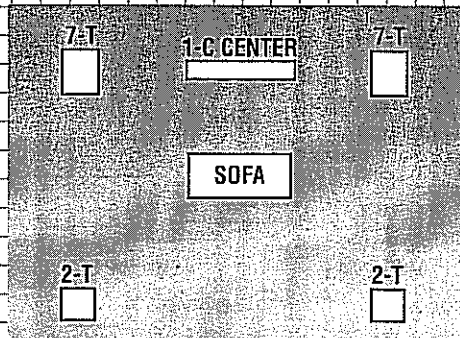

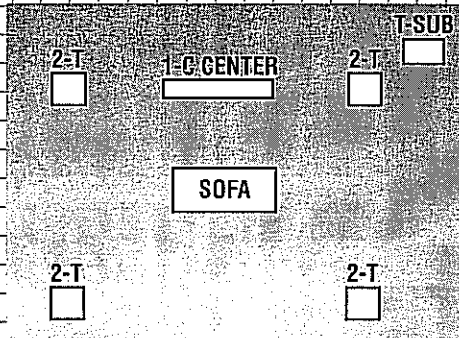

PHASE

To recreate the full excitement and impact of the movie theater, Dolby surround-sound systems consist of six channels: front-left, front-center, front-right, rear-left, rear-right and subwoofer.

**HOME THEATER #1**

**HOME THEATER #2**

**HOME THEATER #3**

System 1 sets a new standard for performance and value. The front channels feature the 1-C center-channel speaker and Phase Technology's 2-T/T-Sub three piece system. In the rear, you have the option of another pair of 2-T's or C1-10 speakers, which mount flush with the wall surface. The system is unique in that all tweeters and mid/bass drivers are identical, creating perfectly balanced sound from any listening position. And the T-Sub produces the ground-shaking bass so important to home-theater realism. Because it is so efficient, the system is ideal for use with the newest of affordable Dolby Pro-Logic Surround receivers. The 2-T satellite speakers may be placed on stands or shelves and can also be easily mounted on the walls with the supplied brackets. You simply won't believe your ears when you hear how much performance is now available for such an affordable price.

Manufacturer's Suggested Retail Price: \$770

Built around the advanced 1-C center-channel speaker, System 2 features a pair of Phase Technology's remarkable 7-T loudspeakers to complete the front channel. And for the rear channels, you may choose either the 2-T's or the C1-10's, which mount flush with the wall surface. The 7-T is an advanced two-way design employing 8-inch polypropylene woofers and 1-inch soft-dome tweeters. Imaging is simply spectacular, and actors' voices come across with convincing body and realism. To achieve a truly awesome soundstage, the 7-T uses a high-tech anti-diffraction tweeter treatment engineered by Phase Technology. And to create the thunderous bass frequencies, each woofer takes maximum advantage of its large, 3130-cubic-inch ported enclosure. The result is the same as having two powerful subwoofers beeping up your system. And the sound of System 2 is spectacular in every respect, yet it remains highly efficient and remarkably affordable.

Manufacturer's Suggested Retail Price: \$920

Phase Technology's System 3 is simply as close as you can get to movie-theater sound without leaving your home. Using the 1-C for the center channel and a pair of 2-T's or C1-10 in-wall speakers for the rear, the system is completed by the ultimate expression of our home-theater technology, the 9-T loudspeaker. Earth-shattering bass comes from its 8-inch polypropylene woofers working in huge 3795-cubic-inch enclosures. The crystalline highs of its 1-inch soft-dome tweeters are enhanced by our high-technology anti-diffraction treatment. This, along with 1-1/2-inch soft-dome ambience drivers mounted on the rear of each enclosure, helps create a completely new sonic dimension, offering a spectacularly deep, spacious soundstage. With System 3, the impression of listening to loudspeakers completely vanishes: You hear "into" the soundtrack as you never have before. It's an experience you must hear to appreciate. And it's all available at a price that will amaze you as much as the sound.

Manufacturer's Suggested Retail Price: \$1,120
