Phase Technology is proud to present the 5-T, a low diffraction tower model offering truly superior sound from both video soundtrack and audio sources such as CD's. With a volume of 2,000 cubic inches and presenting an unobtrusive foot print, these floor standing speakers deliver bass with astonishing impact that brings home the spectacular sound effects and music of the big-screen soundtrack. Because of its innovative design, the 5-T's have the ability to create a wide and deep sonic panorama stretching out before you with precise imaging as the action unfolds.

The outstanding performance of the 5-T's are matched by their practicality. Slim and handsome, they fit unobtrusively into any interior decor. In addition, the speakers are highly efficient, and with an 8 ohm load realistic volume levels are easy to achieve even with modestly powered receivers.

Discover all the magic and realism of the 5-T home-theater loudspeakers today at your nearest Phase Technology retailer.
