

Complete Speaker Solutions

Premier Collection Model PC-500s Floor-Standing Speakers With Integrated Powered Subwoofer

The exciting new Premier Collection Model PC-500s is the company's most advanced home entertainment speaker featuring a powered subwoofer and a progressive, fluid design. These speakers are designed to handle the full dynamic range of today's multi-channel audio technologies, like Dolby Digital and DTS as well as traditional two-channel sources.

This model features left- or right-firing 12" powered subwoofers to enable placement close to the video source, eliminating the need for a separate subwoofer. The 125-watt amp is servo-controlled with auto power-on and includes phase and level controls.

The front speaker array features a solid flat-piston driver to cover the full midrange spectrum of 100 Hz to 2.3 kHz. Also included is a variable-axis soft-dome tweeter, a design invented and patented by Phase Technology, that is independently user-adjustable for precise listener positioning for the most dramatic soundfield and channel separation.

The three-way Premier PC-500s is built with a heavily braced cabinet to dampen surface resonances, offering the thunderous impact of home-theater sound that's only available

Detachable Grilles Available in Black, Burgundy and Grey

from a powered subwoofer. The speakers have a high-gloss piano-black top and uniquely sculpted feet with optional floor spikes.

The innovative floor-standing model is highlighted by two separate, detachable grille covers in three optional colors — burgundy, grey and black. One fits the side-firing subwoofer, and the other appears to float over the tweeter/midrange mounting plate in the front.

The Premier PC-500s offers an intriguing visual appeal and outstanding performance to serve as an exciting centerpiece for your home entertainment system.

SPECIFICATIONS:

Tweeter:	1" variable-axis soft-dome tweeter with Unicell™ anti-diffraction treatment.
Midrange:	6.5" Kevlar-laminated RPF™ solid flat-piston driver with butyl rubber surround

Impedance:	8 ohms
Dimensions:	42.25" H x 7" W (tapering to 9") x 21.25" D
Shipping Weight:	92 lbs. each

Premier Name Honors a Legendary History

Building upon its growing reputation as a critically acclaimed home-entertainment speaker specialist, Phase Technology chose the name "Premier Collection" to recall the company's legendary past. The new speaker series invokes the manufacturer's over four decades of loudspeaker innovation by commemorating its first speaker, the Premier, a folded corner-horn speaker system which was first offered in 1955.

The Model PC-500s features an outstanding new design theme that reflects Phase Technology's move to offer stylized, high performance speaker systems that enhance the listener's enjoyment of movies, music and more.

The Premier Collection's acoustically matched line includes three sizes of bookshelf speakers as well as center-channel and surround units, enabling the company to offer a complete speaker solution for every home entertainment need.
