## Powered Subwoofers Add Punch to Any System

Powered stand-alone subwoofers deliver the deep, floor-shaking bass that brings added realism and unparalleled impact to movie soundtracks and music. Adding one of these subwoofers is the single most important upgrade to any home-theater speaker system.

Complete with their own built-in amplifiers, these subwoofers eliminate the need for an extra power amplifier. Each model in the series can create the added dimension and explosive sonic effects that only true deep bass can deliver.

All of these models feature auto-on circuitry to activate the subwoofer's amplifier when a program source is detected and automatically deactivates the sub when you are finished listening.

Variable crossover points and a phase switch enable any model to match precisely and seamlessly with any speaker system in the Phase Technology Teatro Series.
