MULTI-PURPOSE SPEAKERS EXTEND YOUR HOME ENTERTAINMENT OPTIONS

Phase Technology presents two full-range, multi-purpose speaker systems, the top-notch Model PC-5 and the mid-priced Model PC-33. These three-way models offer an array of speaker solutions for your home entertainment center.

Flexibility is the keyword for Model PC-5 with its user-adjustable speaker array enabling horizontal and/or vertical use. This speaker adds an additional measure of sophistication as it reflects the Premier Collection's styling cues and color choices.

These systems serve as an acoustically matched set – left, right, center and rear – as the foundation for a complete multi-channel system with a powered subwoofer. Both models also serve as a center-channel option for all Premier Collection speaker systems.

These full-range models are designed to accurately handle the rapid volume changes and breadth of frequency response that is the hallmark of digital multi-channel program sources. They offer wide latitude in speaker system placement and positioning due to their innovative user-adjustable features. Enjoy truly breathtaking home-theater realism and, the experts agree, they're outstanding for music, too!

BOOKSHELF MODELS OFFER MORE SPEAKER SOLUTIONS

Phase Technology presents small and mid-sized bookshelf speaker systems to fit your space and your home entertainment needs whether for movies, music or more.

Better dynamics and deeper bass response make the Model PC-2 the perfect choice to invest in a multi-channel system or upgrade a two-channel stereo. For full home-theater realism, add a Phase Technology powered subwoofer and Premier Collection center-channel speaker for total surround-sound effects.

Model PC-2 features a Kevlar-laminated solid flat-piston woofer for enhanced performance. There's also a user-adjustable tweeter for flexibility of speaker placement and precise soundstage positioning. And for full-range performance that belies its small size, audition the Model PC-1 – it must be heard to be believed!
