

[TEATRO TPB-1 TABLE TOP STAND ASSEMBLY INSTRUCTIONS]

The TPB-1 is a stand that is designed to be used with the PHASE TECHNOLOGY[®] TEATRO[®] TCE1.5 or the TFS1.0 Ultra-Thin Speaker Systems for use on a shelf or equipment stand. The Plexiglas stand is designed for vertical installation of the speaker systems. The TPB-1 is a supplied accessory with the TCE1.5 speakers but is optional with the TFS1.0 speakers.

[ASSEMBLY]

Lay the speaker face down on a clean soft surface like a towel or carpet.

Position one of the aluminum posts so that it lines up with 2 of the threaded holes on the rear of one end of the speaker cabinet.

Using 2 of the supplied Phillips flat head screws, loosely attach one of the posts to the rear of the speaker cabinet with the threaded hole in the end of the post facing away from the cabinet.

Repeat the attachment of the other post in the same manner.

Position the smoked Plexiglas base so the holes in the base line up with the threaded holes in the ends of the two posts.

The longer portion of the base should be facing forward.

Using the supplied large Philips pan head screws, attach the Plexiglas base plate to the threaded ends of the two aluminum posts. Caution, do not over tighten these screws.

Now tighten the four screws for the aluminum posts to the rear of the speaker cabinet.

Apply the four self-adhesive feet to the bottom of the base.

The base may be cleaned with a soft cloth dampened with a mild window cleaner.
